The Swedish company Quicksave AB is a developer and manufacturer of innovative rescue equipment in association with professional rescue departments. Quicksave’s line of products are made by professionals for professionals for safer and more effective rescue operations in water.

The company was started by Åsa Magnusson who has won multiple awards for her inventions such as ‘The European Female Inventor of the Year’ and Bronze Price in ‘Seoul International Invention Fair’.

Quicksave stands for quality, and all our products are entirely manufactured in Sweden and fulfills all the tough demands required from rescue equipment, both in Sweden, but by internationally standards as well.
Unique equipment for safer rescues

The best part about Quicksave is that it gives a lot of buoyancy and takes up very little space. It’s handy for us with our small rescue boats. It also gives the victim buoyancy and gives you more control over the rescue.

TORD THURESSON, TEAM LEADER
TOFTA LIFEGUARD STATION
QUICKSAVE
TORPEDO

A professional solution developed for lifeguards who work with safety in and around lakes, oceans, swift water, but also in swimming halls and public pools. QS Torpedo is an inflatable rescue device, which thanks to its construction is small and light weight. QS Torpedo can be deployed below the water surface down to 10 meters of depth, but also on the surface as a regular lifebuoy for securing the victim on the surface. It’s also the only rescue device which enables the lifeguard to swim with both hands while pulling the victim to safety with the victim facing upwards. The QS Torpedo is easily reloaded with a new CO2 cylinder after deployment, and is ready to be used again in a few minutes. Multiple units can be carried in one belt.

TORPEDO

The tube is made of strong and durable nylon, with an anodized aluminium handle covered in rubber for extra grip. It’s designed for lifeguards and has a buoyancy of 60 newton. The yellow color makes it highly visible even in water.
ACCESSORIES TORPEDO

LEG HOLSTER
carried around the thigh and can be attached to the belt

WAISTE HOLSTER
small and discreet holster carried around the waist

PADDED WAISTE BELT
With 5 D-rings and two velcro straps on the back

CHEST HOLSTER
carried on the chest for quick access

TORPEDO TOWING LINE
swim with both hands while pulling the victim to safety

LAMP HOLSTER
can be attached to all QS belts

THROWING LINE
15, 50 or 100 meter throwing line made of durable materials

SECURITY PIN
visual indicator showing when the unit is ready to use

CO2 CYLINDER-PACK
available in packs of 5 or 10 cylinders

QS TEF-GEL
water resistant lubricator for all QS products
